### Introduce yourself

My name is Logan Cooper, I'm a Hudson Valley resident. I grew up in the town of Hyde Park and I transferred to Suny New Paltz after spending two years at Suny Maritime where I started off working on a Mechanical Engineering degree. Once I got to New Paltz I switched to a CompSci major. My ultimate goal in life is to use my degree to get into a design firm in the tech industry preferably in the medical technology industry. I have a good amount of experience in computer science, I've taken multiple classes on Java, C/C++, python, and a few on HTML. From this course I hope to gain a greater understanding of not only web structure design but also more of the backend applications. I am a major fan of design in the tech field and the more I can learn about the design of web applications the better. Ultimately, I simply want to pick up on more useful skills I can apply in the compsci world.
